| Sample collection date: ..... | .....                      |

**Detection of auto-antibodies against IgE and/ or the IgE-receptor**  
s-BHRA/HR-Urticaria Test

### *Practical information – Please note:*

Serum (1-2 mL per patient placed in a transport container) is posted by ordinary mail at ambient temperature to RefLab ApS.

**Method:** Patient serum and donor basophils are incubated. Histamine is measured from stimulated and un-stimulated cells and the results are expressed as histamine release in percentage compared to the total cellular histamine content.

A histamine release >16.5 % is a positive test result.

The test result will be returned to the clinic within 7-21 business days after receipt to the laboratory.
